Product Description

Product Description

Emerson VE5009 DeltaV DC System Power Supply Module

Technical Application

The DeltaV DC/DC system power supply accepts both 12V DC and 24V DC input power. The modular architecture and the power supply's load-sharing capabilities enable you to add more power or provide power redundancy to your system. Your I/O is always accurate because the I/O subsystem and controller always receive a consistent and accurate 12 or 5V DC power supply. The power supplies are compliant with EMC and CSA standards; there is immediate notification of power failure; and system and field power provisions are completely isolated. The system power supply delivers more current on the 12V DC I/O interface power bus and eliminates the need for 24 to 12V DC bulk power supplies. Now, all your controller and I/O power can be sourced from plant 24V DC bulk power supplies.
