## Product Description

### Product Description

Emerson VS6002 DeltaV Redundant SISNet Repeater Module

### Technical Application

This section provides general information on DeltaV SIS hardware. Refer to the Installing Your DeltaV Digital Automation System manual for more information on DeltaV system equipment. DeltaV SIS Equipment A DeltaV automation system consists of carriers, one or more I/O subsystems, controllers, power supplies, workstations, and a control network. SISNet Repeaters hosted by one DeltaV controller communicate with SISNet Repeaters hosted by a different DeltaV controller over a fiber-optic remote peer ring. A local SISNet Repeater collects locally generated messages into a single message and sends it to the next SISNet Repeater in the ring. Upon receipt of a message, the receiving SISNet Repeater broadcasts it on its local peer bus (SISNet) and forwards the message to the next SISNet Repeater in the ring. A global message is forwarded around the ring once. The primary SISNet Repeaters form one fiber-optic ring and the secondary form a separate, independent ring. The fiber rings operate at 100 MB. By using the SISNet Extender, the ring can be a combination of multi-mode and single-mode fiber as required to achieve the inter-node distances.
